

CHRISTIAN DADZIE

(203) 821-1722 | Athens, GA | christiandadzie.q@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Energy professional with experience diagnosing what drives energy and decarbonization challenges and turning analysis into clear recommendations. Background spans upstream oil and gas project development and operations, storage market analysis, and decarbonization strategy. Targeting energy consulting and strategy roles focused on the energy transition.

EDUCATION

Yale School of the Environment **New Haven, CT**
Master of Environmental Management, Energy Specialization August 2023 – May 2025
Three Cairns Scholar (inaugural 2023 cohort) | Bekenstein Climate Fellow (inaugural 2024 cohort)

Kwame Nkrumah University of Science and Technology **Kumasi, Ghana**
BSc Petroleum Engineering September 2015 – July 2019
First Class Honors | Provost's Engineering Excellence Award

CORE COMPETENCIES

Energy Market Analysis | Decarbonization Strategy | Energy Storage | Scenario & Business Case Analysis | GHG & Emissions Analysis | Data Analysis: Excel, Python | Geospatial Analysis: ArcGIS Pro | Stakeholder Engagement

EXPERIENCE

King Energy **Remote**
Utility Specialist February 2026 – Present

- Review customer tariff structures and support tariff-change coordination with major California utilities to improve project economics and portfolio revenue performance
- Prepare and submit Virtual Net Energy Metering allocation tables that determine how solar generation credits are distributed across tenant accounts

Renewable Energy Analyst December 2025 – January 2026

- Developed King Energy's 2025 operational GHG emissions profile across Scope 1–3 to support sustainability reporting and internal emissions tracking
- Investigated and corrected meter misallocations across tenant accounts, improving solar-credit accuracy and portfolio-level energy data

BrandSafway **Remote**
EDF Climate Corps Fellow, Fleet Decarbonization Analyst July 2025 – September 2025

- Quantified \$1.5M in annual fuel and maintenance costs tied to idling, harsh driving, and speeding across BrandSafway's North American fleet, and modeled \$150K–\$268K in annual savings under behavior-reduction scenarios
- Built fleet performance profiles across 5 operational zones and 241 branches to identify high-impact areas and prioritize targeted driver interventions
- Synthesized behavioral, organizational, and technology findings into a phased fleet decarbonization roadmap for North American operations

Avangrid / Yale Center for Business and the Environment
Graduate Consultant

New Haven, CT

August 2024 – December 2024

- Evaluated battery-storage market opportunities across New England and New York to identify the strongest near-term market-entry option for Avangrid
- Compared four BESS technologies across seven states, analyzing interconnection queue dynamics in ISO-NE and NYISO, utility pricing, and state policy environments
- Recommended LFP short-duration storage as the strongest near-term entry point based on supply-chain maturity and storage mandates in Maine and New York

Connecticut Department of Energy and Environmental Protection
Summer Fellow, Bureau of Energy and Technology Policy

New Britain, CT

May 2024 – August 2024

- Built an Excel-based model to forecast energy demand and electrification pathways across 40+ Connecticut state agencies, incorporating solar, energy-efficiency, and electric-vehicle targets
- Assessed whether existing programs were sufficient to meet 2030 climate goals, establishing a baseline to support future energy-planning and investment decisions

Pecan Energies Ghana Limited
Trainee Operations Engineer

Accra, Ghana

March 2021 – December 2022

- Developed the operations philosophy and logistics OPEX model underpinning the \$4.4B Pecan deepwater oilfield development economics
- Translated Ghana's amended Petroleum Local Content Regulations (LI 2435) into practical sourcing, contracting, and supply chain implications for the Pecan development project

LEADERSHIP

Yale School of the Environment
Co-Lead, Energy Student Interest Group

New Haven, CT

January 2024 – January 2025

Organized internship panels, alumni networking events, and a low-carbon building materials panel for the Yale Clean Energy Conference

Teaching Fellow, Physical Science Foundations

Fall 2024

Supported graduate students through weekly office hours in physical science fundamentals
