

CHRISTIAN DADZIE

(203) 821-1722 | New Haven, CT | christiandadzie.q@gmail.com | [LinkedIn](#) | [Website](#)

EDUCATION

Yale School of the Environment

New Haven, CT

Master of Environmental Management, Energy Specialization

August 2023 – May 2025

Three Cairns Scholar (inaugural 2023 cohort) | Bekenstein Climate Fellow (inaugural 2024 cohort)

Kwame Nkrumah University of Science and Technology (KNUST)

Accra, Ghana

BSc Petroleum Engineering | First Class Honors

September 2015 – July 2019

Second Year Research Project: Municipal Solid Waste to Landfill Gas-to-Energy Feasibility

Provost's Engineering Excellence Award

EXPERIENCE

King Energy

Remote

Utility Communications Specialist

February 2026 – Present

- Evaluate customer tariffs and coordinate favorable tariff changes with major California utilities to support project economics and portfolio revenue performance
- Manage the end-to-end tenant and utility onboarding process across more than 200 distributed solar programs, coordinating authorization approvals, utility account setup, and Virtual Net Energy Metering submissions
- Identify and resolve utility submission and tenant allocation issues that delay solar credit activation, improving portfolio accuracy and revenue realization

B2B Partner Renewable Energy Analyst

December 2025 – January 2026

- Developed King Energy's 2025 operational GHG emissions profile across Scope 1–3 to support sustainability reporting and internal emissions tracking
- Resolved meter misallocations across tenant accounts to improve solar credit accuracy and portfolio-level energy data

BrandSafway

Remote

EDF Climate Corps Fellow, ESG Analyst

July 2025 – September 2025

- Quantified \$1.5 million in avoidable fleet costs and 3,500 tons of avoidable CO₂ emissions by analyzing the impacts of idling, harsh driving, and speeding across BrandSafway's North American fleet
- Developed regional fleet performance profiles that identified operational hotspots and presented recommendations to equity partners and EHS leadership, directly informing targeted driver interventions across high-impact regions
- Synthesized behavioral, organizational, and technology findings into a phased fleet decarbonization roadmap for BrandSafway's North American operations

Avangrid / Yale Center for Business and the Environment

New Haven, CT

Graduate Consultant

August 2024 – December 2024

- Conducted an energy storage market analysis for Avangrid covering New England and New York energy markets
- Evaluated four battery technologies (LFP, NMC, flow battery, iron-air) across seven states, analyzing interconnection queue dynamics in ISO-NE and NYISO, utility pricing, and state policy environments
- Identified LFP short-duration storage as the strongest near-term market-entry option based on supply-chain maturity and state-level storage mandates in Maine and New York

Connecticut Department of Energy and Environmental Protection**New Britain, CT****Summer Fellow, Bureau of Energy and Technology Policy**

May 2024 – August 2024

- Built an Excel-based model to forecast energy demand and electrification pathways across more than 40 state agencies, incorporating solar, efficiency, and electric-vehicle targets
- Assessed whether existing programs were sufficient to support Connecticut's 2030 climate goals and established a baseline for tracking future performance

Pecan Energies Ghana Limited**Accra, Ghana****Trainee Operations Engineer**

March 2021 – December 2022

- Developed the operations philosophy and logistics OPEX model underpinning the \$4.4B Pecan deepwater oilfield development economics
- Translated Ghana's amended Petroleum Local Content Regulations (LI 2435) into practical sourcing, contracting, and supply chain implications for the Pecan development project

SELECTED ANALYTICAL PROJECTS

Energy Equity & Solar Potential Analysis | Python**Spring 2025**

- Analyzed energy burden and residential rooftop solar potential across U.S. states and counties using NREL data in Python (pandas, geopandas, scikit-learn)
- Applied K-means clustering to group counties by energy burden, solar potential, income, and race; conducted spatial autocorrelation analysis using Moran's I to assess the geographic concentration of energy inequity

Methane Flux Prediction, Okavango Delta | R**Fall 2024**

- Built a random forest regression model in R to predict methane flux from soil and vegetation variables across wetland ecosystem types
- Incorporated spatial cross-validation to account for geographic heterogeneity and reduce overfitting across sampling sites

Solar Site Suitability Modeling, Chicago | ArcGIS Pro**Fall 2024**

- Built a three-submodel GIS framework integrating energy demand, socioeconomic hardship, and land-use data across Chicago community areas
- Identified priority zones for equitable solar installation by overlaying electricity consumption, population hardship indices, and land classification data

LEADERSHIP

Yale School of the Environment**New Haven, CT****Co-Lead, Energy Student Interest Group**

January 2024 – January 2025

- Co-organized student programming including internship panels and alumni networking events
- Organized a panel on low-carbon building materials for the Yale Clean Energy Conference

Teaching Fellow, Physical Science Foundations**Fall 2024**

- Supported graduate students from varied technical backgrounds through weekly office hours in physical science fundamentals
